

NADS

miniSim

The PC-based driving simulator
with many applications

Research

- Distraction
- Impairment
Sensitivity to alcohol, drugs, driver fatigue, etc.
- Clinical
Sleep, vision, etc
- Cognition and Perception
- Human Factors
- Advanced Vehicle Safety Systems
- Intelligent Transportation Systems (ITS)

Training

- Novice / Advanced Drivers
- Car and Heavy-Truck Platforms

Visualization

- Roadway design / review
- Community outreach

www.nads-sc.uiowa.edu/minisim

Why choose the miniSim™

Simulation provides safety, consistency, reliability, and a custom-tailored driving environment for research or training

 **The MiniSim™ provides the best value on a not-for-profit basis.**

 **Unmatched support through e-mail, phone and web.**

 **NADS has expertise** in developing measures and scenarios to support your research.

 **A large collection** of proven scenarios for investigating distraction, impairment, vehicle safety and cognition issues.

 Access to a national network of researchers who are using the same core simulation technology, facilitating standardization, collaboration and sharing of scenarios, data, and ideas.

 NADS conducts ground-breaking driving simulation research and is home to the most advanced driving simulators in the world.

 NADS simulation platforms represent twenty years of simulator development experience.

Our partner organizations using the MiniSim™ provide a source for collaborative and multi-site research.

The MiniSim website grants each partner the ability to share scenarios, update software, share research, and meet other MiniSim users in a secure environment.
