Driving Excellence: Transforming the Future

Our Mission:

Improving safety by researching the connection between drivers, motor vehicles, and road users

INNOVATION

COLLABORATION

EMPOWERMENT

INTEGRITY

**COMMITMENT TO
OUTREACH**

Our Capabilities

Development

- Hardware Engineering / Instrumentation
- Software Engineering
- Integration with 3rd Party Devices / Software
- Vehicle Dynamics
- Automated Vehicle Models
- Driver Behavior Models

Human Subject Studies

- Experimental Design / Test Plan
- IRB / Subject Recruitment / Handling
- Data Collection using Simulators, Instrumented Vehicles, Naturalistic Data Recorders
- Dosing/Drug Protocols
- Data Reduction / Analysis
- Report Writing

NADS-1 Projector and IG Upgrade

- (16) 1920 x 1200 LED Projectors
- Replaced 8 Barco Sim6 projectors installed in 2005
- Mounting system designed and installed in-house
- Image Generator (IG) software developed in-house
 - Rendering
 - Warping and Blending
 - Projector control/admin
 - IG node control

NADS-1 Projector and IG Upgrade

Development of a new cab for NADS-1

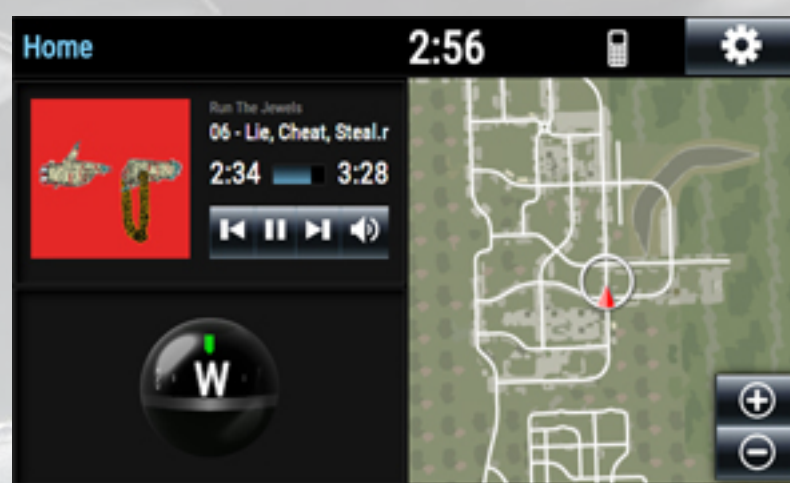

Development of a new cab for NADS-1

CAN bus integration

Fully programmable infotainment system

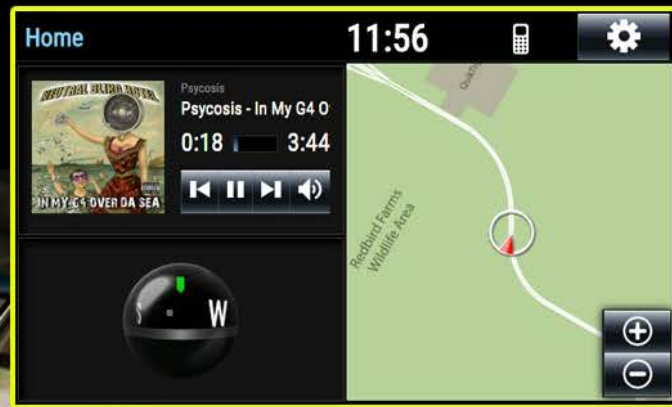

Interior representative of modern vehicles

Emulation of OEM Infotainment Systems

Vehicle infotainment system

- Touchscreen interface to replace (but mimic) OEM Toyota Entune (2015) system. Fully-integrated OEM physical keys (steering wheel buttons, etc)
- Built entirely in HTML/Javascript (Node JS)
- Beyond being controlled by the driver, also controllable by simulator operators, researchers, and/or programmatic triggers
 - GPS positioning/mapping created leveraging overhead map infrastructure
 - All interactions (touch + physical) logged and broadcast in real time to researchers

Home Screen

Touch target (researcher view)

Full audio suite (AM / FM / MP3)

(ABOVE) : Customizable menu system, SMS functions

(BELOW) : GPS / mapping system

graphic design

multimedia

web design + programming

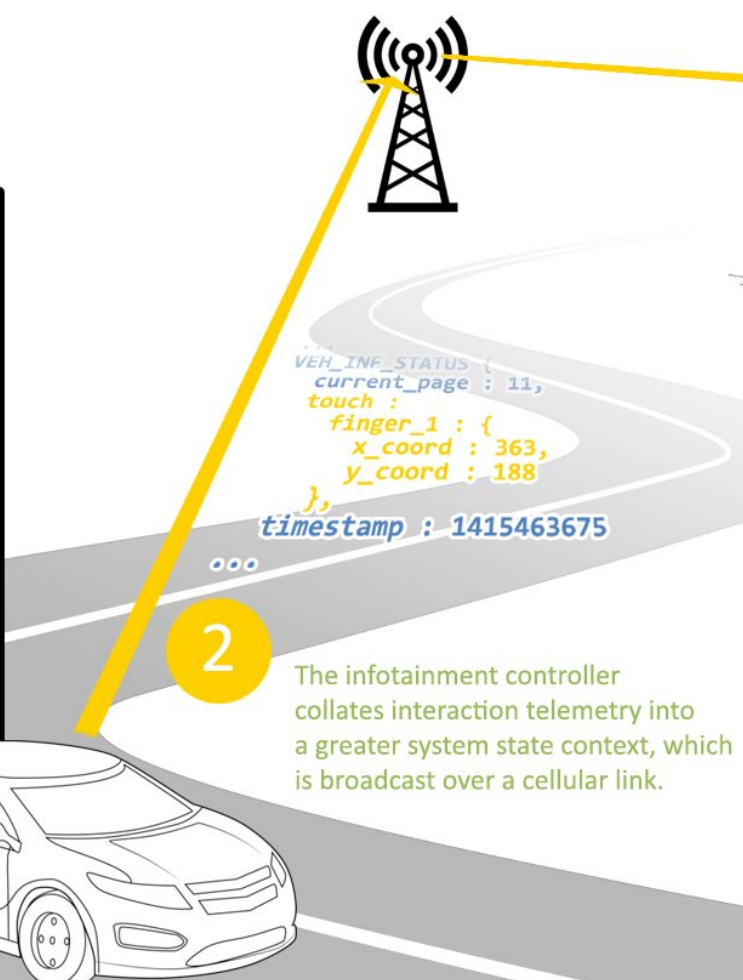

The National Advanced Driving Simulator, The University of Iowa

1 Interaction telemetry is collected in real time. Touch events and positions are recorded and relayed to the onboard infotainment controller.

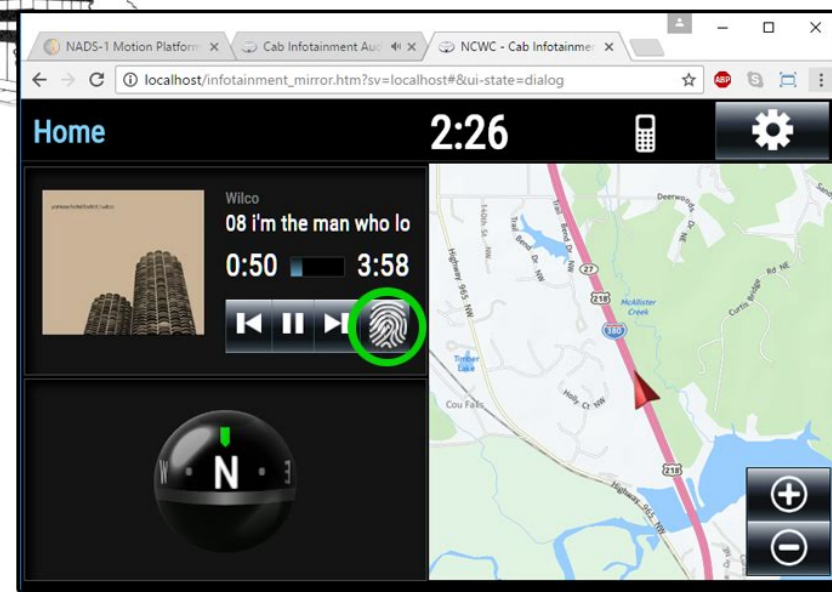

2 The infotainment controller collates interaction telemetry into a greater system state context, which is broadcast over a cellular link.

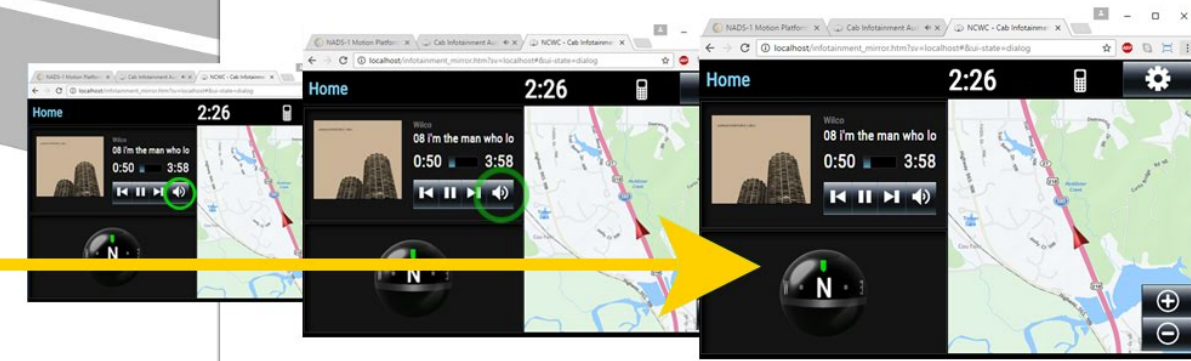

```
VEH_INF_STATUS {  
  current_page : 11,  
  touch :  
    finger_1 : {  
      x_coord : 363,  
      y_coord : 188  
    },  
  timestamp : 1415463675  
}
```

3 Remote observers see a live "mirror" of the system state through a standard web browser.

 Touch points are expressed visually as fingerprint target icons, which ripple and dissipate as the driver removes their finger.

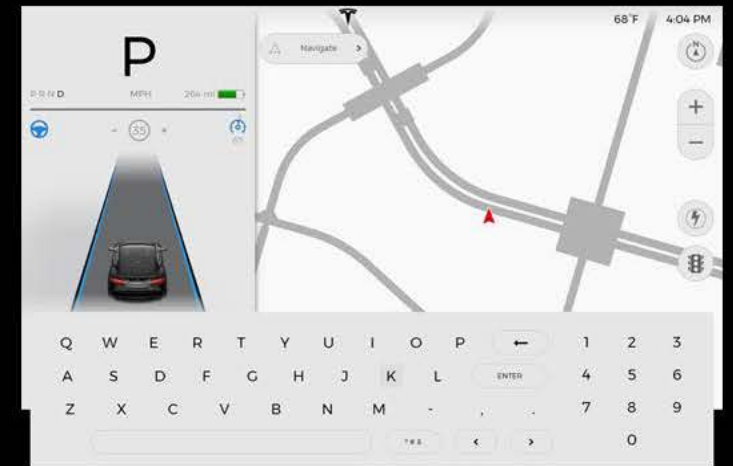

Instrument Cluster + Infotainment System

TESLA MODEL 3

- Approximation of pre-production Tesla OEM system, built to operate with NADS simulators, and instrumented vehicles
- miniSim-compatible

Day & Night
operation modes

NADS-1 Cab Scope

- New 2015 Camry purchased ‘off the lot’
- Disassembly and fabrication
 - Flex-plate/airbag assemblies for dome interface
 - Structural Reinforcements for Vibration Actuators
 - Power Entry and Equipment Rackspace
- Instrumentation
 - UEI Ethernet DAQ (www.ueidaq.com)
 - CANbus
 - Active Steering and Brake loaders (E2M, www.e2mtechnologies.eu)
 - Audio PC, amplifiers, speakers, tactile transducers
 - Chiller for cab air conditioning (dome is air-conditioned)
 - Custom Infotainment Interface
 - OLED display in gage cluster replaces OEM display
 - Cab controls work normally (ignition, gage cluster, climate control, driver controls, etc)

NADS miniSim™

- Portable, small footprint
- Off-the shelf parts. Single PC.
- Cost Effective, Reliable
- Multiple configurations
 - Quarter Cab
 - Simplified Cab
 - Desktop
- Tool for collaboration across institutions/industry/agencies
- Scenarios/software compatible with NADS-1, NADS-2 simulators
- Growing network of users
- Software actively being improved
 - Distributed simulation
 - Automated vehicle models
 - Multi-site studies
